TECHNICAL SCHEDULE

- HULL -

The hull is single-skinned GRP construction.
Reinforced points (keel, rudder, chain plates, hull-deck joint) help to strengthen the structure.

A single-skinned structural inner moulding is bonded and laminated to the hull. Its structural role is important as it takes and absorbs the stresses at pressure points (shroud chain plate tie rods, keel, rudder etc.) and spreads any loads **guaranteeing reduced strain on the hull.**

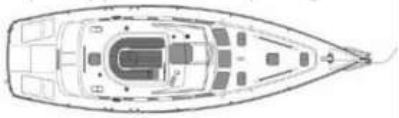

The surface material of the inner moulding makes **cleaning easier** and provides **a better finish**.

The standard hull colour is white with blue and silver livery. Steel Blue is available as an option.

- DECK -

The deck is sandwich construction (glass fibre and balsa) for an optimal strength/weight ratio, as well as excellent thermal and sound insulation.

A "diamond point" non-slip surface increases safety over all areas of movement on deck.
